The SCAN Pathway

1. Patient visits the GP
2. GP assesses patient and refers patient to the SCAN pathway
3. Patient is given the information leaflet and a blue-top sample pot
4. A member of the SCAN team contacts the patient via phone and arranges a CT scan appointment.
5. At the CT appointment the patient signs the consent form. Has some blood taken and has a CT scan.
6. The CT and bloods are reviewed by the SCAN team.
   - A cancer is discovered
     - Patient is referred to the appropriate cancer team for further investigation and treatment.
   - No obvious pathology is found.
   - A non-serious pathology is identified.
     - Patient is referred to the Multi Diagnostic Centre (MDC) for further assessment by a senior clinician.
     - SCAN team organises further imaging or radiology follow up when needed.
