

Would recommend the Trust to friends and family

70% of staff

95% of women having babies

97% of day-case patients

95% of outpatients

96% of inpatients

87% of patients in A&E

Data collected from the Friends and Family Test (FFT) confirm that

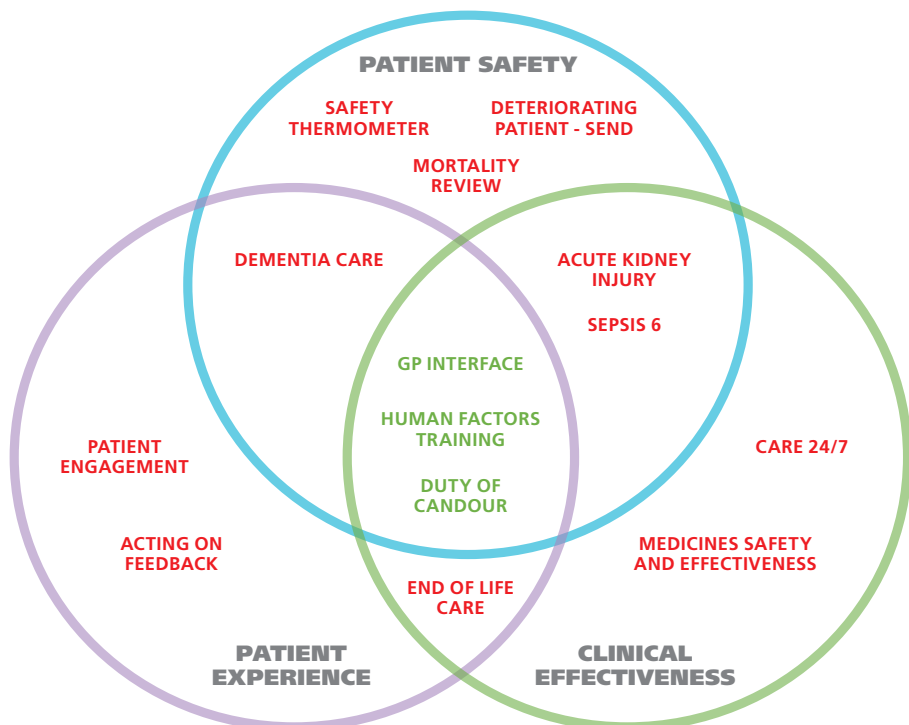

Oxford University Hospitals **NHS** NHS Trust

SIGN UP TO SAFETY QUALITY PRIORITIES / SAFETY CULTURE

The following diagram shows the relationship between the different quality priorities in the Trust and the three domains of quality.

Our interactions with GPs; providing human factors training; and our responsibilities regarding duty of candour (being open), are priorities that impact on all three quality domains.

What Quality means to us...

QUALITY ACCOUNT SUMMARY 2014-15

“By 2017 all our clinical services will be recognised as providing high quality care, while some will be able to demonstrate that they provide the highest quality compared to international benchmarks.”

OUH Quality Account 2014-15

WE REMAIN COMMITTED TO DELIVERING COMPASSIONATE EXCELLENCE, KEEPING PATIENTS AND STAFF AT THE HEART OF WHAT WE DO.

These were our Quality Priorities for 2014/15

PATIENT SAFETY

CARE 24/7

Safe, effective and high quality care on all four sites '24/7' – twenty four hours a day, seven days a week.

What we did

- ✓ Reorganised the 'Out of Hours' team – nurses and clinical support workers took on extra skills allowing junior doctors to spend more time with sicker patients.
- ✓ Improved communication process between day and night teams relating to concerns about sicker patients.

What this means

This is a national project and forms part of our plans to make our hospitals even safer and efficient during evenings and weekends. Helping the Out of Hours team prioritise its workload means sicker patients are seen quicker.

CLINICAL EFFECTIVENESS

DIABETES AND PNEUMONIA

Lots of our patients have diabetes, whilst many with pneumonia are looked after on general rather than specialist respiratory wards. We examined our care at risk summits and made plans to improve our services.

What we did

- ✓ Increased diabetic specialists (doctors, nurses, podiatrists) so more diabetic patients and those with diabetic foot disease are seen faster. Increased staff training.
- ✓ Patients with suspected pneumonia are now seen by a senior doctor within 30 minutes.

What this means

- ✓ The nurses and doctors have had extra training and help from the specialist team.
- ✓ The respiratory team can give advice and visit patients on wards with severe respiratory conditions to help improve their breathing and posture.

MEDICAL DOCTORS CARING FOR PATIENTS IN SURGICAL AREAS

When medical doctors help look after patients with complex health problems in surgical areas they often get better faster.

What we did

- ✓ Maintained a five-day service on the Surgical Emergency Unit. We hope to expand this to other services 2015/16.

PATIENT EXPERIENCE

DISCHARGE FROM HOSPITAL

Our goal was to simplify and standardise the process of discharge so as to improve the experience of patients.

What we did

- ✓ Ran a winter campaign on how to keep well over the winter.
- ✓ Produced new joint policies with other organisations to improve the discharge process.
- ✓ Made major improvements to turnaround and pick up times by Arriva transport service.

OUTPATIENT SERVICES

We wanted to improve the experience of our outpatient department (OPD).

What we did

- ✓ Made more clinic slots available in OPD so it is easier for patients to book appointments.
- ✓ Ran customer care training for clinic managers.

PSYCHOLOGICAL MEDICINE SERVICE

Our goal was to set up a team of psychologists and psychiatrists to support patients with prior psychological problems when they have a physical illness.

What we did

- ✓ Expanded the team. Patients urgently referred have access to a psychiatrist within four hours, and routine referrals within one working day.

And it doesn't stop there – this year our priorities are:

PATIENT SAFETY

PREVENTING AVOIDABLE PATIENT DETERIORATION AND HARM IN HOSPITAL: Sign up to Safety

OUH has joined the national Sign Up to Safety campaign.

Success will mean:

- ✓ Spotlight on seriously ill & deteriorating patients via twice daily consultant reviews in intensive & high dependency areas and the roll out of our electronic early warning system (SEND).
- ✓ Fewer harms in hospital: pressure ulcers acquired in hospitals, falls causing harm, urinary catheter infections and venous thromboembolism (blood clots).

EMERGENCY DEPARTMENT

Sustained achievement of the 4 hour ED standard.

Success will mean:

- ✓ More help for patients with mental health or alcohol problems.
- ✓ Intense focus on the discharge of transfer 95% of patients within 4 hours in A&E.

PATIENTS WITH ACUTE KIDNEY INJURY (AKI)

Better recognition, prevention and management of AKI for patients admitted in an emergency.

Success will mean:

- ✓ Kidney blood tests checked within 24 hours.

CLINICAL EFFECTIVENESS

LEARNING FROM DEATHS AND HARMS TO IMPROVE CARE

We aim to have a year on year reduction in mortality rates.

Success will mean:

- ✓ Increased emphasis on the review of deaths and shared learning to maximise improvements in care.

MANAGEMENT OF PATIENTS WITH SEPSIS

Prompt recognition and treatment of sepsis when a patient presents in an emergency.

Success will mean:

- ✓ Rapid life-saving treatment: IV antibiotics within one hour of presenting to emergency admission areas.

PATIENT EXPERIENCE

END OF LIFE CARE

We want our end of life care to be excellent in all areas of the Trust and on all shifts.

Success will mean:

- ✓ New training for staff to provide compassionate & consistent end of life care.
- ✓ Better liaison between OUH and community services for patients near the end of their life.

IMPROVING COMMUNICATION, FEEDBACK, ENGAGEMENT AND COMPLAINTS MANAGEMENT

Over the last year we've worked hard to improve how we engage with our service users. Feedback has shown there is more we need to do.

Success will mean:

- ✓ Help from patient advocacy & carers groups to develop a new privacy & dignity policy, and a carer's feedback system.
- ✓ New complaints management training.
- ✓ Focus on being open and honest with patients and families if something goes wrong.
- ✓ Better interface with GPs: hospital doctors easier to contact, plus quicker notification of test results and discharge summaries.
