Dear service user

### **RE: Update of Oxford Neuroimmunology service repertoire**

With the on going developments occurring at the Oxford Neuroimmunology service, I am writing to update and inform you that until further notice and with immediate effect, the Live cell NMDA receptor antibody assay will no longer be available for testing. This change is unfortunately out of our immediate control but it is hoped that this assay will be available again in the future of the service.

Any samples that have already been sent to the service for Live NMDA testing will have a report returned explaining that the assay can now no longer be run.

We continue to offer the Fixed cell NMDA receptor antibody assay which is the predominant NMDA receptor antibody assay performed at Oxford.

Kind regards

Dr Ross Sadler  
Clinical Lead for Laboratory Immunology
