High arm sling advice

Information for patients

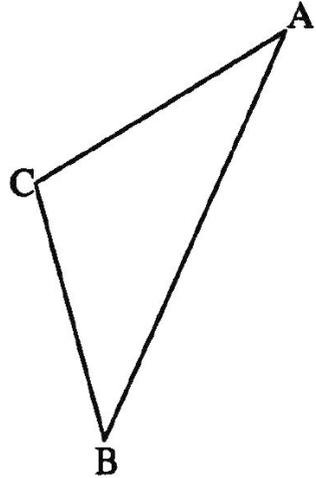

Emergency Department

High arm sling

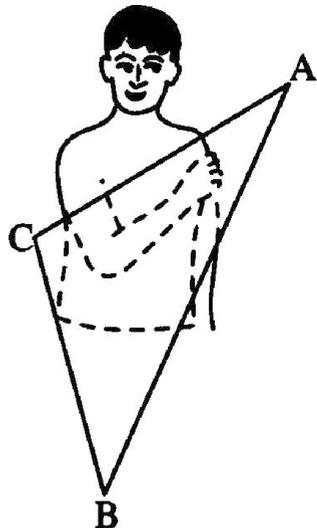

You have been advised to keep your arm elevated (raised up) in a high arm sling. This will help reduce swelling of your hand and wrist.

How to apply a high arm sling

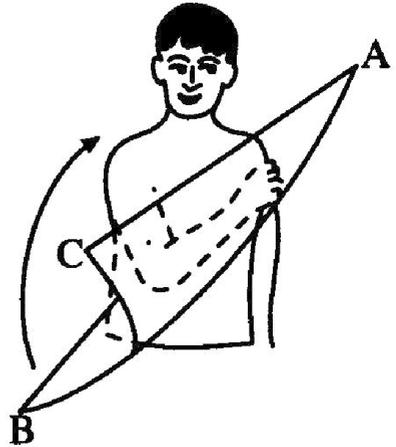

- Place your injured hand on the opposite shoulder.
- Lay the sling diagonally across your chest from shoulder to elbow, following the natural line of your injured arm.

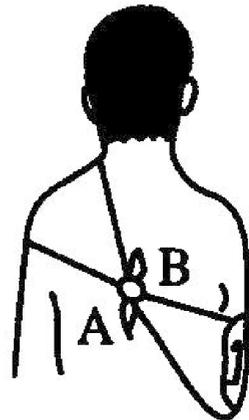

- Side A C should be at the top.

- Tuck side A B under your elbow, making sure that your hand has been included in the sling.
- Take point B around towards your back.

- Tie point A to point B in the middle of your back or, if it's more comfortable, it can be tied just below the shoulder of your injured arm.

- Gather point C together to form a natural cradle for your elbow to sit in, and pin around the back of the sling with a safety pin.

How to look after your arm

It is important that you take your arm out of the sling and exercise it every hour. This will prevent your shoulder, elbow and fingers from becoming stiff.

Exercises

1. Bend and stretch your injured arm.
2. Rotate your upper arm and shoulder.
3. Touch the back of your head (as far as you are able).
4. Touch your lower back (as far as you are able).
5. Wiggle your fingers.

For further information or advice

Please contact your GP or NHS 111 (dial 111 (freephone) from any landline or mobile).

Feedback

We aim to provide you with a high quality service at all times. If you have any comments, concerns, or complaints about your experience of our service, please tell a member of the team or contact the Patient Advice and Liaison Service (PALS).

Email: **PALS@ouh.nhs.uk**

Call **01865 221 473**

01295 229 259
