

Perceive, Recall, Plan, Perform (PRPP) System of Task Analysis PRPP Assessment Course

Presenters: Dr Chris Chapparo DipOT, MA, PhD & Dr Judy Ranka BSc(OT), MA, HlthScD
Oxford Centre for Enablement, 7-11 June 2019

The Perceive, Recall, Plan & Perform (PRPP) Assessment is part of the PRPP System of Task Analysis – a dynamic system of assessment and intervention. The PRPP Assessment is a standardised, person-centred, criterion referenced, occupational therapy assessment of occupational performance. **It is used with clients of any age, gender, diagnosis or cultural background whose performance is compromised by difficulties with the cognitive demands of occupations. The assessment yields information about performance mastery and cognitive strategy application capacity.** Strategy application behaviours assessed align with dimensions of attention and perception (P), learning, memory and recall (R), planning, decision-making and judgment (P), and the capacity to act on decisions and follow through with plans (P). The PRPP assessment is used internationally, and has been translated into several languages. It has established validity in a variety of practice domains including **neurology, mental health, learning disabilities, autism, chronic pain, HIV-associated neurocognitive disorders** and **dementia**. Acceptable reliability has been demonstrated following training. The PRPP system has been developed in association with the Occupational Performance Model (Australia): www.occupationalperformance.com

Objectives. Participants will be able to:

- describe the occupational therapy, neurosciences and educational foundation of the assessment, and its psychometric properties
- assess and score task performance mastery from videotaped examples using Stage One of the PRPP Assessment
- assess and score cognitive strategy application behaviours demonstrated during task performance using Stage Two of the PRPP Assessment
- write specific, measurable occupational performance mastery and strategy application goals for clients assessed
- use the PRPP Assessment as a person-specific occupational performance outcome measure
- begin to use assessment findings to determine a focus for occupational therapy intervention.
