

Enhanced Recovery After Surgery (ERAS)

**Laparoscopic Nephroureterectomy
or Robotic Nephrectomy (keyhole
surgery for partial or complete
kidney removal)**

Patient Diary

What is Enhanced Recovery?

Enhanced recovery is a way of improving the experience and wellbeing of people who need major surgery. The programme focuses on making sure that you are actively involved in your recovery, recover quicker and aims to get you home sooner.

There are four main stages:

- planning and preparation before admission (including improving your nutrition and physical fitness before surgery)
- reducing the physical stress of the operation
- a structured approach to pre-operative (before surgery), intra-operative (during surgery), and post-operative (after surgery) management, including pain relief and early nutrition
- early mobilisation (getting you moving as soon as possible).

The purpose of this diary is for you to record your thoughts and feelings and to note down your progress during your time in hospital after your operation. We encourage relatives and friends to be involved in your recovery, they can help you recover by taking you for walks, provided the nurses agree it is safe to do so.

The diary is designed for you to complete, but your relatives, friends and members of the team looking after you (doctors and nurses) can help you to fill it in if you find this difficult. This diary sets out an example of what to expect in the first few days after your surgery. The programme may not be suitable for everyone. If this is the case for you, the team looking after you can make changes, making sure that the care you receive is not only of the highest quality, but is also designed around your specific needs.

This document is not legally binding and if your recovery is different to the programme set out, this is nothing to be worried about. We realise that every person is different, and everyone will achieve the goals at their own pace.

Whilst we hope that you will complete this diary, it will not affect your care if you choose not to.

Day of Surgery

| |
|----------|
| Date/Day |
|----------|

Plan: Recover from the anaesthetic. Have something to eat and drink. Effective pain control with painkillers. Sit up in bed or out in the chair.

Mobility: *(tick if achieved)*

I was able to sit up in bed

I was able to sit in the chair

Nutrition: *(tick if achieved)*

I was able to have something to drink
Water Squash Tea/Coffee

I was able to have something to eat

**If kidney, ureter and bladder surgery
(Nephroureterectomy):**

I was supported with the care for my urinary catheter

How I feel today:

Post-Operative Day One

| |
|----------|
| Date/Day |
|----------|

Plan: Sit in the chair. Go for 2 walks (ask for help if you need it).
Get dressed into your own clothes. Have something to eat and drink.

Mobility: *(tick if achieved)*

I was able to sit in the chair for **3** hours (am and pm)

Aim to time this around your mealtimes

I was able to go for **2** walks

Distance walked (aim for 2 walks, each of 60 metres)

Nutrition: *(tick if achieved)*

I was able to have something to drink

Water Squash Tea/Coffee

I was able to have something to eat

**If kidney, ureter and bladder surgery
(Nephroureterectomy):**

I was able to care for my urinary catheter

How I feel today:

Recovery Goals and Targets

Your recovery will involve the removal of the various drips and tubes that were put in during your surgery. You will now start to feel free and be able to walk around, without fear of pulling something out. It is from this time onwards your recovery really makes a turning point and the team looking after you will work with you, your family and friends to prepare you for leaving the hospital.

Below is a list of goals and targets that we would like you to achieve to help your recovery and to get ready for leaving hospital.

Every person is different, and everyone will achieve the goals at their own pace. This table is for you to make a note of the day you reached the goal for your own reference and allows you to see your progress.

| Goal/Target | Post-operative day achieved |
|--|------------------------------------|
| Sit in the chair for majority of the day, returning to bed for a one or two hour rest in the afternoon | |
| Walk independently along the ward and back; or back to your level of independence | |
| Get dressed into your own clothes (unaided) | |
| Able to eat and drink (without any nausea or vomiting) | |
| Be assessed as competent to safely administer your dalteparin injections (or have an alternative option in place if unable to self-administer) | |
| If Nephroureterectomy surgery: Be assessed as confident/competent with your urinary catheter care | |

Leaving Hospital

The Enhanced Recovery Programme is based on criteria-led discharge and when you have achieved all the criteria, it is time for you to leave hospital.

The criteria are listed below:

(Please tick when achieved – this is for your reference only)

| Discharge criteria | Tick when achieved |
|---|---------------------------|
| Assessed as medically fit for discharge | |
| Effective pain control with oral analgesics (painkillers) | |
| Managing to eat and drink with no nausea or vomiting | |
| Independently mobile (or back to your usual level of independence); able to get self out of bed and on/off toilet | |
| Competent with dalteparin self-administration (if applicable), or have an alternative option in place | |
| Received Fit note (sick note) <i>if required</i> | |
| If Nephroureterectomy surgery: confident with urinary catheter care and catheter discharge pack given | |

Medications for Going Home

After your surgery you will need some new medications to take home. Please ask the Urology Ward team whether you need to continue taking the medications you were on before your surgery.

Please use the following list to check that you have everything you need. If you have any questions, speak to your ward nurse or doctor.

| Medication | Tick if supplied | Explanation |
|--|------------------|--|
| Paracetamol tablet | | Mild painkiller. To be taken regularly for the first week and then continued as needed, to help you remain active and able to continue to achieve your recovery goals. Gradually stop this pain killer last. |
| Ibuprofen tablet <i>(if advised suitable by your surgical team based on your blood results)</i> | | Mild painkiller. To be taken regularly for three days to help you remain active and able to continue to achieve your recovery goals. Gradually stop this pain killer second. |
| Codeine or tramadol tablet | | Moderate painkiller. To be taken as needed to help you remain active and able to continue to achieve your recovery goals. Gradually stop this pain killer first. |

| | | |
|---|--|--|
| | | <p>Managing constipation: Codeine or tramadol may affect your normal bowel pattern and cause constipation. Please use the laxative provided whilst taking codeine or tramadol, to help with constipation. It is important that you do not stop this painkiller too soon after leaving hospital, as this may affect you achieving your recovery goals.</p> |
| <p>Please note it is safe to take paracetamol, ibuprofen and codeine or tramadol together if required for pain relief.</p> | | |
| Omeprazole capsule (if ibuprofen advised) | | An antacid to help protect your stomach whilst taking ibuprofen. |
| Laxido sachet | | A laxative to help soften your stools. To be used whilst taking codeine or tramadol, to help with constipation. |
| Dalteparin injection | | An injection to reduce your risk of blood clots. To be taken for 28 days after surgery. If you already take medication to thin your blood, you will be given this dalteparin injection at a higher dose before resuming your blood thinning medication. |

ERAS Patient Experience Questions

We would like to understand how you felt about your recent stay in hospital and would be grateful if you could answer the following questions. Your answers will be treated confidentially. We value your input in helping us look at ways of improving our service.

Thank you.

Do you feel the Enhanced Recovery After Surgery programme improved your recovery? (please **tick** one answer)

Yes

No

If no, what were the reasons?

Did you feel being on the Enhanced Recovery After Surgery programme allowed you to be involved in your recovery?

(please **tick** one answer)

Yes

No

I did not need to be involved

Don't Know

Were there any parts of the Enhanced Recovery After Surgery programme that you felt were not relevant for you?

(please **tick** one answer)

No

Yes

If yes, what parts did you feel were not relevant?

How well do you think your pain was managed after your surgery?

Poorly managed

Adequately managed

Very well managed

ERAS Patient Experience Questions

Did you find the Enhanced Recovery After Surgery patient information leaflet useful? Yes No

Did this make you feel – (please **circle** the most appropriate words)

well informed prepared in control confident happy
supported unclear unprepared out of control anxious
stressed unsupported frustrated

Did you find the Enhanced Recovery After Surgery Patient Diary useful? Yes No

Did this make you feel – (please **circle** the most appropriate words)

well informed prepared in control confident happy
supported unclear unprepared out of control anxious
stressed unsupported frustrated

Did your overall care experience make you feel –
(please **circle** the most appropriate words)

well informed prepared in control confident happy
supported unclear unprepared out of control anxious
stressed unsupported frustrated

If you could change one part of the Enhanced Recovery programme, what would it be?

Do you have any other comments?

After completion, tear this page out of the booklet and leave on the hospital ward before you are discharged home.
Thank you.
